Abstract

A floor mop has two carrier plates (5) that are connected with a common carrier center piece (3) in jointed manner and carry an absorbent mop covering (6). A mop handle (1) is affixed on the carrier center piece (3) by way of a cardan joint (2), in jointed manner. A wringer slide (9) that can be moved along the mop handle (1) and is guided not to rotate has two rigid wringer arms (11), the ends (11a) of which can each be brought into engagement with a guide surface (17) on the back of the carrier plate (5) assigned to them, in each instance, by way of rollers (12).
